

WHITEPAPER

Cockroach Crypto Party

\$CCP – Version 1.0

The People's Meme. The Roach Revolution.

SOLANA MEME TOKEN · COMMUNITY-DRIVEN · AUGUST 2026

01 Introduction & Vision

Cockroach Crypto Party (\$CCP) is a community-driven meme token built on Solana. It draws its identity from two enduring ideas: the internet's love of memes, and the cockroach's reputation as nature's ultimate survivor — an organism that has outlasted ice ages, mass extinctions, and everything else the world has thrown at it.

\$CCP does not claim to reinvent finance or solve a technical problem. It exists for the same reason most meme tokens exist: to bring people together around a shared joke, a shared identity, and the shared thrill of watching a community grow from nothing. What separates a meme token that lasts from one that fades is rarely its code — it's the community behind it. \$CCP is a bet on that community.

\$CCP is created purely for entertainment and community participation. It claims no political affiliation or official connection with any organization, and it makes no promises about future value. Section 6 of this document sets out the risks in full — please read it before engaging with \$CCP in any way.

The Roach Thesis

Every market cycle produces tokens that vanish the moment sentiment turns. The cockroach is \$CCP's answer to that pattern: not a promise that the price will survive, but a mascot and a mindset for a community built to keep showing up — through hype, through silence, and through everything in between.

02 How It Works

\$CCP is issued as a standard SPL token on the Solana blockchain. Solana was chosen for its transaction speed and low fees — typically a fraction of a cent per transaction, with block times around 400 milliseconds — which makes frequent trading and small transactions practical for a fast-moving meme community.

Fair Launch via Bonding Curve

\$CCP launches through pump.fun, a Solana launchpad built around a "bonding curve" pricing model. A smart contract sets the token's price automatically as more of it is bought: price starts low and rises with demand. There is no presale, no private allocation, and no whitelist — every buyer, from the first to the last, buys from the same public curve.

Graduation to Open Market

Once a token's bonding curve reaches its target market cap, it "graduates": liquidity migrates automatically onto a decentralized exchange (such as Raydium or PumpSwap), and the token begins trading like any other, with price set by ordinary open-market supply and demand.

Why This Model, Honestly

This model makes launches fast and fair, but it is also inherently speculative by design. It rewards early participation and offers no guarantee of graduation, liquidity, or lasting value. See Section 6 for a full risk disclosure.

03 Tokenomics

Name	Cockroach Crypto Party
Ticker	\$CCP
Blockchain	Solana
Token Standard	SPL
Total Supply	1,000,000,000 CCP
Contract Address	Coming Soon

Allocation

-  Liquidity — 80%
-  Community — 10%
-  Marketing — 5%
-  Development — 5%

ALLOCATION	%	PURPOSE
 Liquidity	80%	Seeds trading liquidity through the bonding curve and, after graduation, the DEX pool.
 Community	10%	Community rewards, giveaways, and holder incentives.
 Marketing	5%	Campaigns, partnerships, and community growth initiatives.
 Development	5%	Website, tooling, and ongoing project upkeep.

04 Roadmap

Phase 1 🥚 Egg Stage

- Brand creation
- Website launch
- Social media setup
- Meme campaign

Phase 2 🐛 Baby Roach

- Solana token launch
- Community growth
- Marketing campaigns
- Exchange applications

Phase 3 👑 Mega Roach

- NFT collection
- Global meme expansion
- Community events

This roadmap reflects current intentions, not commitments. As a community-driven meme project, priorities may shift based on community input, market conditions, and available resources.

05 Community & Links

\$CCP has no company, no office, and no customer support line — it has a community. These are the official channels:

 X / Twitter

x.com/Cockroaccoin

 Telegram

t.me/coackroajanarapartii

 Discord

discord.com/invite/5dJdRhgFa

 pump.fun

pump.fun

Always double-check links against the official channels above. Scammers routinely impersonate meme-coin socials with lookalike accounts — if in doubt, don't click.

06 Risk Disclosure

Please read this section in full before acquiring, trading, or otherwise interacting with \$CCP.

No intrinsic value

\$CCP is a meme token. It is not backed by any asset, company, revenue stream, or reserve. Its price is determined entirely by market speculation and supply and demand — first on its bonding curve, and later on the open market.

No promise of returns

Nothing in this document, on the \$CCP website, or in official \$CCP community channels constitutes a promise, guarantee, or prediction of future price or performance. Past performance of any token, including comparable meme tokens, is not indicative of future results.

High volatility and risk of total loss

Meme tokens, and pump.fun-launched tokens in particular, are highly volatile and speculative. The large majority of tokens launched on bonding-curve platforms lose most or all of their value. Be prepared to lose your entire position.

Not financial advice

Nothing in this whitepaper or on the \$CCP website is financial, investment, legal, or tax advice. Do your own research (DYOR) and consult a qualified professional before making any financial decision.

Unaudited contract

As of this writing, the \$CCP smart contract has not undergone a formal third-party security audit. Interact with it at your own risk, as you would with any unaudited token.

Regulatory uncertainty

The regulatory status of meme tokens varies by jurisdiction and continues to evolve. It is your responsibility to understand and comply with the laws that apply to you.

No political affiliation

As stated throughout this project's materials, \$CCP claims no political affiliation or official connection with any organization, individual, or government.

Community-driven, not a company

\$CCP is a community project, not a registered company or regulated financial entity. There is no formal team obligation, roadmap guarantee, or fiduciary duty owed to holders.

By acquiring or interacting with \$CCP, you acknowledge that you have read and understood these risks, and that you are acting entirely at your own discretion and risk.
